

Castelle Network Fax Servers

FaxPress™, FaxPress Premier™, FaxPress Enterprise™

Integrating Castelle Fax Servers with Ricoh GlobalScan Software

Castelle's Network Fax Solution

Castelle network fax servers are a complete hardware and software solution designed to provide an unlimited number of users the ability to send and receive faxes directly from applications, various email environments and over the internet. FaxPress, FaxPress Premier and FaxPress Enterprise save time for the user by eliminating the multi-step, multi-location process of sending and receiving faxes. Production fax tools for receiving, archiving and sending faxes are included with all Castelle fax servers.

Other key benefits include increased security of inbound faxes, improved logging of fax delivery, enhanced accounting of fax usage and higher quality of outbound documents.

Castelle Network Fax Servers

Features & Benefits

Castelle FaxPress and Ricoh GlobalScan provide a complete fax solution for all electronic and paper-based documents.

Integrate with Existing Enterprise Applications Capture paper information for easy electronic retrieval.

Send Electronically and Securely Fulfill security and compliance requirements; Password authentication option available at the device.

Dynamic User Interface Reflects unique user permission and preferences at the MFP.

Utilize External Phone Books Enter recipient information manually at the console, or select a contact from an external database.

Departmental Needs Configure devices with unique requirements for each workgroup.

Cover Pages Ability to select a FaxPress corporate cover page from the console.

Manage Devices from One Central Location

Castelle fax servers provide an ideal scan in, fax out solution for a variety of copier, scanner and MFP devices. Integrating a FaxPress fax server with these devices provides walk-up copier, scanner and MFP user immediate access to an intuitive, user-friendly fax interface. Paper documents are easily converted to electronic fax files with the touch of a button. Once a document is scanned, the copier, scanner or MFP is immediately free for further use since all fax retries occur at the FaxPress.

Integrating Castelle FaxPress with Ricoh GlobalScan Software

Castelle FaxPress services for GlobalScan 2.0 enable Ricoh multifunction products (MFP) customers to fax documents directly from the MFP console using a Castelle FaxPress, FaxPress Premier or FaxPress Enterprise fax server. Castelle provides two services:

- Castelle Fax - Allows administrators to configure a shared account so that users will not be required to login every time they need to send a fax.
- Castelle Authenticated Fax - Allows administrators to require that users be required to login using their personal FaxPress account in order to send a fax from the MFD.

These two services are mutually exclusive. Upon installation and configuration of the system, administrators will make the decision whether they will require users to login using their own personal FaxPress account before they are allowed to scan and fax the document through FaxPress. If the administrator chooses not to require login, a gateway account must be added using the FaxPress client and then configured as a shared GlobalScan account using the service admin configuration interface.
