CASTELLE®

A market leader in network fax solutions, Castelle provides an economical way for companies to integrate fax into desktop, email and back-end applications. No more walking to the fax machine or waiting around for confidential faxes. The plug-&-forget nature of Castelle products means FaxPress and FaxPress Premier fax servers come with all the necessary hardware and software and do not require per user licenses. That's why network administrators find FaxPress an easy-to-install and easy-to-manage server appliance that saves your company time and money.

Solution Benefits

The Castelle and Verity alliance brings together the strengths of the TeleForm form recognition system with FaxPress fax software and allows for automation of the entire form-to-fax process.

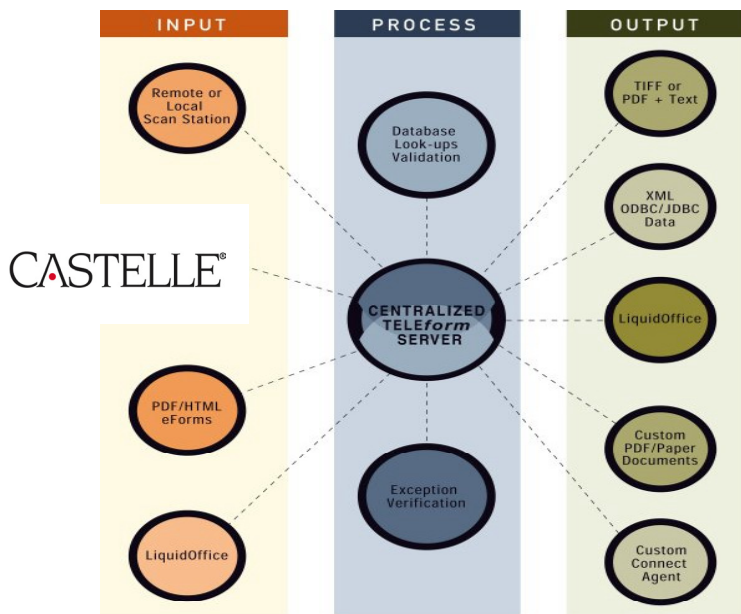

With options to fit standard network faxing needs, FaxPress compliments TeleForm and provides fax server support for form distribution and processing. Integrating FaxPress with Verity Software applications allows you to:

- Increase efficiency by automating document processing.
- Integrate form-to-fax data functions.
- Minimize implementation times, interface and management costs.

Solution Integration

With the FaxPress/TeleForm integration, business forms such as purchase orders, invoices, and order forms are received by FaxPress and routed to the specified network directory for TeleForm processing. The TeleForm Reader module retrieves each fax from this directory and places it in the TeleForm queue, which resides on the file server. TeleForm then reads and verifies handprint and machine print data and sends that information and image to a database or back-end repository.

Expandable Product Line

Designed as a departmental or workgroup fax server, FaxPress offers a scalable fax solution ranging from an entry-level, single-line unit to a high-end, eight-line unit. Castelle's new FaxPress Premier, designed for enterprise-level applications, offer eight to sixteen analog fax lines, or up to three digital T-1 lines per fax server. And since FaxPress and FaxPress Premier fax servers can work together on the same network, additional units can be added to the network at any time to handle increased fax demand.

FaxPress for Business Faxing

FaxPress network fax servers are ideal for small to medium-sized workgroups. To store its system files and faxes, FaxPress uses network storage such as a file server or workstation. FaxPress can be installed with any Microsoft Windows, Novell NetWare or Linux server and allows administrators to synchronize the FaxPress and network user database through Microsoft Active Directory Server Interfaces (ADSI), Novell Bindery and NDS. For Novell users, FaxPress provides a Single Sign On (SSO) capability that eliminates the need for users to juggle multiple passwords.

FaxPress Premier for Enterprise Faxing

Built on existing FaxPress features, FaxPress Premier Analog and FaxPress Premier Digital represent an advanced, state-of-the-art approach to network faxing for the enterprise market. Its patent-pending technology offers a number of enhanced features, including integrated file storage for system and fax data files, a multitasking embedded Windows Operating System and pre-installed FaxPress Premier server software. FaxPress Premier provides a very powerful and flexible software development kit allowing users to develop custom applications and production fax applications, and achieve the highest level of ROI.
